¹ One MB is equal to one million bytes, one GB is equal to one billion bytes and one TB equals 1,000GB (one trillion bytes). Actual user capacity may be less due to operating environment.

² Advanced Format drive: 4K (4096-byte) physical sectors.

³ Portion of buffer capacity used for drive firmware.

⁴ Based on internal testing; performance may vary depending on host environment, drive capacity, logical block address (LBA), and other factors. The location of the max rate is at approximately 10% into the capacity of the HDD. 1MiB = 1,048,576 bytes (2²⁰), 1MB = 1,000,000 bytes (10⁶).

⁵ This product has an AFR specification rating based on typical workload and temperatures. The AFR specification is based on a sample population and is estimated by statistical measurements and acceleration algorithms under typical operating conditions at 40°C device reported temperature. Derating of AFR and max rated workload will occur above these parameters. AFR ratings do not predict an individual drive's reliability and do not constitute a warranty.

⁶ Idle specification is based on use of Idle_A.

⁷ 5°C ambient temperature, 60°C device reported temperature.
