## Polarization Mode Dispersion (PMD)

|  | Value $(\mathrm{ps} / \sqrt{\mathrm{km}})$ |
| :--- | :---: |
| PMD Link Design Value | $\leq 0.06^{*}$ |
| Maximum Individual Fiber PMD $\quad \leq 0.2$ |  |
| *Complies with IEC 60794-3: 2001, Section 5.5, |  |
| Method 1, $(\mathrm{m}=20, \mathrm{Q}=0.01 \%)$, September 2001. |  |

The link design value is a term used to describe the PMD of concatenated lengths of fiber (also known as $\mathrm{PMD}_{\mathrm{Q}}$ ). This value represents a statistical upper limit for total link PMD. Individual PMD values may change when fiber is cabled. Corning's fiber specification supports emerging network design requirements for high-data-rate systems operating at $10 \mathrm{~Gb} / \mathrm{s}$ or higher.
