## Important Information:

- 1. System memory: 64-bit operating system is required to support 4GB or more of system memory.
- 2. Graphics & System Memory: Significant system memory may be used to support graphics, depending on system memory size and other factors. Actual performance speed will depend on what the CPU supports.

  \* If this product is purchased with Intel® 6th Gen CPUs or 7th Gen Celeron® dual core CPU, the maximum MHz this product can
- achieve is 2133, though the memory material used is 2400 MHz.
- 3. Hard Drives (GB and TB): GB means 1 billion bytes and TB means 1 trillion bytes; actual capacity varies with preloaded material and operating environment and will be less.
- 4. Gigabit Ethernet: This term does not connote an actual operating speed of 1GB/sec. For high speed transmission, connection to a Gigabit Ethernet server and network infrastructure is required.

## Important Information:

- 1. System memory: 64-bit operating system is required to support 4GB or more of system memory.
- 2. Graphics & System Memory: Significant system memory may be used to support graphics, depending on system memory size and other factors. Actual performance speed will depend on what the CPU supports.

  \* If this product is purchased with Intel® 6th Gen CPUs or 7th Gen Celeron® dual core CPU, the maximum MHz this product can
- achieve is 2133, though the memory material used is 2400 MHz.
- 3. Hard Drives (GB and TB): GB means 1 billion bytes and TB means 1 trillion bytes; actual capacity varies with preloaded material and operating environment and will be less.
- 4. Gigabit Ethernet: This term does not connote an actual operating speed of 1GB/sec. For high speed transmission, connection to a Gigabit Ethernet server and network infrastructure is required.
